

CELEBRATING SUCCESS

Flexible Apprenticeship with **Supashock Advanced Suspension**

Supashock has further reinforced its commitment to the development of youth in the north, by providing exciting opportunities in the automotive and defence industries. This term, **Sarah (Year 11)** commenced a school based Flexible Apprenticeship. Supashock will continue to support the completion of Sarah's SACE, whilst she receives practical on-the-job training. Sarah will undertake a Certificate III in Engineering at TAFE SA whilst gaining practical skills in fabrication, CNC Machining, general assembly and quality control.

Oscar Fiorinotto, founder and CEO, attributes Supashock's global success to its' people. Supashock enjoys strong relationships with all three Universities and has built its business from sourcing talented Engineers as interns and investing heavily in their skill development and building their capability. To overcome the skills shortage for experienced CNC Machinists, Supashock has aligned itself with the Department for Education Apprenticeships Officer, TAFE SA and the Department of Defence by offering work placements for skill enhancement and industry experience. The team at Supashock is passionate about sharing their skills and knowledge with students.

Sarah has a passion for motorsport and jumped at the opportunity for work experience. She is currently completing an Cert II Engineering VET program at school, providing her with foundation skills and has helped to prepare her for this pathway.

Supashock founded in 2005, is a world-class producer of advanced mobility systems that control, monitor and improve the mobility of defence, autonomous, commercial, automotive, motorsport and other transport vehicles.

Supashock is located over two facilities at Holden Hill and Edinburgh Parks, originated from building suspension systems for motorsport and has now built a highly skilled team to design, manufacture and test a wide range of global mobility applications. Supashock's products range widely throughout defence, transport, and science industries on a global scale.
